

POLYPROPYLENE

KEY FEATURES

- Superior warmth
- Ultra soft to the touch
- Excellent moisture management
- Raglan sleeves
- Easy care (machine washable)
- Lightweight & comfortable (190 GSM fabric)

Sherpa PCD II Polypropylene Baselayers are the ideal baselayer. Worn close to the skin they keep you warm, dry and comfortable.

Sherpa's PCD II Polypropylene has the lowest thermal conductivity of any traditional fabric, allowing your body to retain its natural heat. It does not absorb moisture, so it keeps you dry. Any moisture that is generated is wicked away from the body leaving a warm layer of air next to the skin.

PCD II Polypropylene is also very lightweight and extremely quick to dry, making it easy to keep fresh for multi-day users. It is significantly softer than other polypropylenes and is extremely comfortable to wear.

You will always perform at your best in Sherpa PCD II Polypropylene Baselayers.
